

INDUSTRIAL ODORGONE **(With MicroCool Odor Control Systems)**

Your INDUSTRIAL ODORGONE Odor Neutralizer with your MicroCool Odor Control Systems will produce an INDUSTRIAL ODORGONE infused fog barrier with droplets as small as 2 microns that rise and remain airborne between the odor source and the odor complaint to neutralize any odors before they can escape your facility. INDUSTRIAL ODORGONE and MicroCool Odor Control Systems are designed to be easily installed in just a few steps. All parts to complete the installation and have you System up and neutralizing are included.

INDUSTRIAL ODORGONE Odor Neutralizer is specially developed for your MicroCool Systems. INDUSTRIAL ODORGONE will maintain the peak system performance and long life you expect. INDUSTRIAL ODORGONE keeps pump internals clean, system running smooth and nozzles clog resistant so the infinite variety of noisome odors throughout your facility are continually neutralized at the highest dilution rates possible.

The optimal dilution rate is achieved when neither the odor nor the INDUSTRIAL ODORGONE can be detected, leaving zero odor off the property. INDUSTRIAL ODORGONE also meets your demand for a safe, environmentally friendly product so environmental responsibility is not a question.
